Authority Control Module

Improve your cataloging accuracy using our Authority Control Module for Atriuum.

Exclusively designed for Atriuum users, the authority control module provides the ability to maintain and control author/subject authority records, build "See" and "See Also" cross-referencing, and provide expanded OPAC searching.

The authority control feature identifies when author, corporate, or meeting names are not formatted properly or not contained within your local authority file. Catalogers can "Browse" their local authority file for the approved format, or add the new terms to their local authority file.

- Improves cataloging accuracy and searching

- Supports importing/exporting USMARC 21 authority records

- Includes author/subject-heading authority reports

- Provides ability to search, add, and modify existing authority records

- Works with a variety of USMARC 21 Authority Subscription services
